# Uniq-Supadek the scaffold board solution

Uniq-Supadek is an innovative scaffold board that is revolutionising the scaffolding and access markets.

Manufactured from a recyclable polymer composite, Uniq-Supadek possesses many unique features and benefits that give it a number of distinct advantages over its more traditional timber and steel alternatives.

Lightweight, durable and strong, Uniq-Supadek is easier to use, cleaner and safer than timber and steel decking boards. It is suitable for a wider variety of applications throughout the general building industry and other, more specialised, areas, such as food, chemical and pharmaceutical processing, oil and energy and many industrial applications.

Safety, easy handling, cost savings and environmental responsibility are just a few of the benefits that Uniq-Supadek delivers, making it the preferred choice for many scaffolding and access contractors.

## Safety

Uniq-Supadek's integral textured, high grip surface provides sure footing in virtually every working situation, whilst the absence of knots, splitting, rotting, warping, rusting and denting ensures consistently high strength and performance characteristics throughout the board's working life as well as eliminating the risk of injury from splinters or metal bands.

Stronger than a British Standard timber scaffold board, Uniq-Supadek is impervious to water and resistant to oil, solvents, acids and salt water, reinforcing the board's safety features and significantly enhancing its versatility and durability in application.

**Available  
with Class 1  
fire resistance  
to BS476**

## Easy to use

Uniq-Supadek is lighter than a British Standard timber scaffold board. This, together with Uniq-Supadek's consistent weight characteristics, particularly in wet conditions where the board's impermeability to water ensures that it does not gain weight through water absorption, make Uniq-Supadek one of the easiest and safest boards to handle.

The lack of splinters and metal bands reduces the risk of hand injuries, whilst ergonomic rubber end caps with finger grips and the board's high grip surface further enhance Uniq-Supadek's ease of handling.

Versatility in use is assured by the range of sizes available for batten and board applications and the fact that Uniq-Supadek can be easily cut to size, making it suitable for use with all popular scaffolding and access systems.

## Economic

Uniq-Supadek's exceptional durability delivers a longer working life and provides an excellent return on investment, with a host of cost saving benefits:-

Easy handling offers the potential for faster erection and dismantling.

Inspection procedures are simplified by the absence of knots, splitting, rotting, warping, rusting, etc.

Trouble-free maintenance (Uniq-Supadek can be pressure washed again and again) increases the product's working life and further increases Uniq-Supadek's cost saving potential.

The capability for Uniq-Supadek to incorporate company identification and customer codes offers increased stock security and reduces the risk of wastage.

## Environmentally friendly

The fact that Uniq-Supadek is 100% recyclable after use reduces dependence on the earth's natural resources and enables the product to satisfy your organisation's environmental policies.

From a contamination viewpoint, Uniq-Supadek is chemically inert, dust and particle free and will not rust, split or rot, removing the need for additional protection in clean room environments. Easy cleaning adds to Uniq-Supadek's suitability for these applications.

## Performance & quality

Uniq-Supadek has been independently tested in accordance with BS EN 12811-1: 2003:

Temporary works equipment - Part 1

'Scaffolds – performance requirements and general design', attaining Class 6, the highest performance rating achievable.

Independent strength, durability and chemical resistance tests undertaken at the University of Wales confirm Uniq-Supadek's status as a high performance scaffold board.

Uniq-Supadek is manufactured using a patented production process specially developed to create the recycled plastic boards.

Computer controlled manufacturing systems and stringent product testing procedures ensure that mechanical properties and product finish do not vary and provide the consistent performance and quality that give Uniq-Supadek the benefits and features that make it such an advantageous product.

Quality that is further assured by production control systems that are accredited to ISO 9001: 2000.

## Benefits and features

- Stronger than timber boards
- Lighter than timber boards
- Rubber end caps with finger grip for easy handling
- Easy to clean and maintain
- Consistent high strength and performance throughout working life
- Textured high grip surface for sure footing
- No splinters or metal bands – reduced risk of hand injury
- Impermeable to water
- Resistant to oil, solvents, acids and salt water
- Constant weight makes for easier and safer handling

## Standard product range

Uniq-Supadek is available in two section sizes: 225mm x 45mm for board applications and 225mm x 65mm for batten applications.

The 45mm board is supplied as a standard 3.9m length, whilst the 65mm batten is available in lengths of 2.4m, 1.8m and 1.2m.

Any length is available on request.

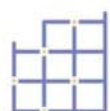

### Lengths and weights

Section\Length	1.2m	1.8m	2.4m	3.9m
225mm x 45mm	-	-	-	<b>15.50kg</b>
225mm x 65mm	<b>7.32kg</b>	<b>10.56kg</b>	<b>13.80kg</b>	-
